Inferno Tech Talk – April 2025

Yunwei Wang MITRE Inferno Team April 9, 2025

© 2025 THE MITRE CORPORATION. ALL RIGHTS RESERVED. APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED. CASE NUMBER 18-2559

Inferno Tech Talk Introduction

- Purpose: to provide regularly scheduled updates on the Inferno tool and its implementation of the (g)(10) test procedure
- Typical agenda to include:
 - Announcements about upcoming releases
 - Training on new features
 - Highlight outstanding issues or known problems
 - Open discussion
- Monthly recurrence: 2nd Wednesday at 1PM ET
- This call is being recorded and will be posted on https://inferno.healthit.gov/events/

Content reflects Inferno's implementation of applicable Test Procedure and does not necessarily reflect ASTP/ONC policy.

Today's Agenda

- Inferno Framework Updates
- (g)(10) Standardized API Test Kit v7.1.0/v7.2.0
- Other Test Kits Update
 - Bulk Data Test Kit v0.12.1
 - SMART App Launch v0.6.1
 - UDAP Security v0.11.3
 - PAS v0.12.2
- Discussions / Questions

Inferno Framework Updates

ALL Inferno Test Kits are updated to Ruby v3.3.6

- For local deployment using Ruby environment:
 - Need update Ruby version to v3.3.6.
- Move shared testing logic into Inferno Core
 - Ex: Must Support assertions
- AuthInfo
 - If you have automatic test using UI integration, you should update for the new UI layout.

ONC (g)(10) Standardized API Test Kit v7.1.0/v7.2.0

• Test Update:

- Test changes that should not result in new failure: 0
 - Due to core Inferno updates (Ruby version and authorization-related input changes), we categorized these two releases as "minor" releases instead of "patch" releases, as test behavior may have changed slightly as a result
- Test changes that should not affect score of passing implementations: 2

(g)(10) Updates: Observation BMI dataAbsentReason Validation

- FHIR Validator throws error if a resource
 - Does not have valueQuantity but provides dataAbsentReason
 - Is validated using US Core BMI profile
- Observation: Slice 'Observation.value[x]:valueQuantity': a matching slice is required, but not found (from <u>http://hl7.org/fhir/StructureDefinition/bmi[4.0.1</u>).
- Reason:
 - US Core BMI profile has an optional valueQuantity slice
 - FHIR BMI profile has a required valueQuantity slice
 - When validator validate a resource, the resource has to not only conform to its own profile but also profiles in FHIR base spec.
- Solution:
 - Add a validation error filter.

(g)(10) Updates: Granular Read Test with 4xx error

- Test error reported on zulip for test 9.14.1.3.04 "Server filters results for Observation read on granular scopes"
- After granular authorizsation, Inferno sends read request on unauthorized granular resource and expect server to return 4xx error with OperationOutcome payload
- If server returns only 4xx without empty payload, Inferno test crashes because the response body does not contain any FHIR resource(s).

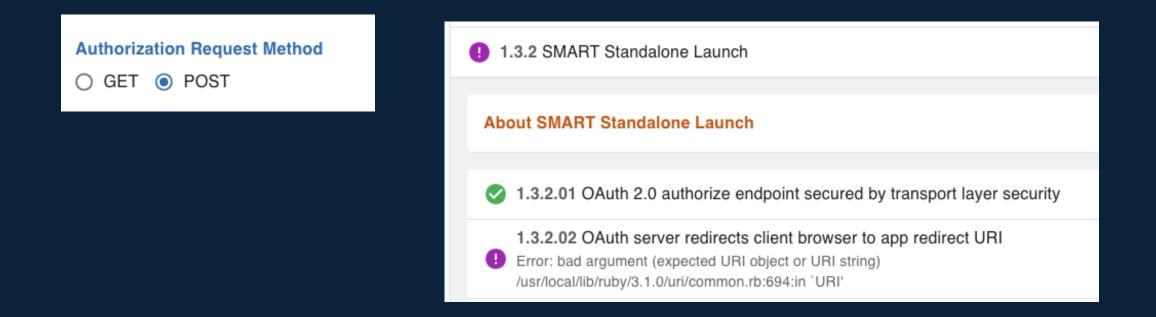

9.14.1.3.04 Server filters results for Observation reads based on granular scopes Error: undefined method `add_namespace_definition' for nil:NilClass doc.root.add_namespace_definition('f', 'http://hl7.org/fhir')

^^^^

/usr/local/bundle/gems/fhir_models-5.0.0/lib/fhir_models/bootstrap/xml.rb:6:in `from_xml'

SMART App Launch v0.6.1

- Fixed a bug when running POST authorization request in some Inferno Test Kit, such as US Core Test Kit.
 - (g)(10) Certification Test Kit is NOT affected by this change.

Bulk Data Test Kit v0.12.1

- New Bulk Data Access Client Test Suite
 - For Bulk Data v2.0.0

Start Testing

Test Suite

- O Bulk Data Access v1.0.1 Server
- Bulk Data Access v2.0.0 Server
- O Bulk Data Access v2.0.0 Client

Create Test Session

Bulk Data Access v2.0.0 Client v.o.11.1			
Bulk Data Access v2.0.0 Client			
1 Bulk Data Client Export Tests	1 Bulk Data Client Export Tests		
2 Bulk Data Client Delete Tests	The Bulk Data Client Export tests verify the ability of a client to:		
Report	 Kick-off a new bulk data export request Poll the in-progress request for status updates Download a completed bulk data export file 		
	1.01 Wait For Request Sequence		
	1.02 Bulk Data Kick-off Request		
	1.03 Bulk Data Status Request		
	1.04 Bulk Data Output File Request		

SMART App Launch v0.6.1 and UDAP Security v0.11.3

- Added client tests for server-to-server flows, including
 - UDAP business to business client credentials flow
 - SMART backend services

ODAP Security Client	V.0.11.3
Preset Vone	UDAP Security Client VDAP Security Client
 UDAP Security Client 1 UDAP Client Credentials Flow 1.1 Client Registration 1.2 Client Access 	Overview The UDAP Security Client Test Suite verifies the conformance of client systems to the STU 1.0.0 version of the HL7® FHIR® Security for Scalable Registration, Authentication, and Authorization (UDAP Security) FHIR IG.
